                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SDPPA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SDAGE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TOYGS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        868
                                                                                                     The present sequence is novel human protein

(MHP) known as human kinase. The human kinases share structural

similarity with animal kinase. The human kinase share structural

chreonine protein kinases. Human kinase cDNA is useful for the

detection of mutant human kinase for the diagnosis of disease,

and also as a therapeutic. It is useful for screening drugs

effective in the treatment of symptomatic or phenotypic

manifestations perturbing the normal function of MHP in the

body. The NHP nucleotide sequences are useful for generation of

antibodies, as reagents in diagnostic assays, for the

identification of other cellular gene products related to human

kinases, and as reagents in assays for screening compounds that

are useful for treating mental, biological or medical disorders.

NHP oligonucleotides are used as probes. The labelled NHP probes

are useful for screening human genomic library for identifying

polymorphisms and as primers in amplification assays to detect

mutations within the exons, introns and splice sites that can

be used in diagnostics and pharmacogenomics. Nucleotide construct

cencoding NHP products are used to genetically equineer cells

in vivo that functions as bioreactors in the body delivering a

continuous supply of NHP to the body. Nucleotide constructs

cencoding functional NHPs are used in gene therapy for the

modulation of NHP expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is rovel human protein

(NHP) known as human kinase. The human kinases share structural

similarity with animal kinases, more particularly serine or

threonine protein kinases. Human kinase cDNA is useful for the

detection of mutant human kinase for the diagnosis of disease,

and also as a therapeutic. It is useful for screening drugs

effective in the treatment of symptomatic or phenotypic

manifestations perturbing the normal function of NHP in the

body. The NHP nucleotide sequences are useful for generation of

antibodies, as reagents in diagnostic assays, for the

chantication of other cellular gene products related to human

kinases, and as reagents in assays for screening compounds that

are useful for treating mental, biological or medical disorders.

NHP oligonucleotides are used as probes. The labelled NHP probes

are useful for screening human genomic library for identifying

polymorphisms and as primers in amplification assays to detect

mutations within the exons, introns and splice sites that can

be used in diagnostics and pharmacogenomics. Nucleotide construct

cencoding NHP products are used to genetically engineer cells

in vivo that functions as bioreactors in the body delivering a

continuous supply of NHP to the body. Nucleotide constructs

encoding functional NHPs are used in gene therapy for the

modulation of NHP expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                   New isolated human kinase polynucleotide useful for generating antibodies, as reagents in diagnostic assays and for screening for compounds useful for treating mental, biological or medical diseases

"WHP) known as human kinase. The human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs ceffective in the treatment of symptomatic or phenotypic manifestrations perturbing the normal function of MHP in the body. The MHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products related to human continities and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. WHP oligonucleotides are used as probes. The labelled MHP probactions are used as probes. The labelled MHP probactions and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide construct encoding functions as bioreactors in the body delivering a continuous supply of MHP to the body. Nucleotide constructs encoding functional MHPs are used in gene therapy for the modulation of MHP expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated human kinase polynucleotide useful for generating antibodies, as reagents in diagnostic assays and for screening feempounds useful for treating mental, biological or medical dise

The present invention relates to an isolated human kinase polypeptide (PKIN) or a biologically active/immunogenic fragment of PKIN. PKIN is useful for diagnosing, treating and preventing cancer (e.g., leukaemia, laymphoma, melanoma), an immune disorder (e.g., acquired immunodeficiency syndrome (AIDS), Addisor's disease, allergy, anaemia, asthma, Crohn's disease, rheumatoid arthritis), a growth and developmental disorder (e.g., atherosclerosis, hypertension, myocardial infarction), and a lipid disorder (e.g., fatty liver, cholestasis, cardiovascular disorder (e.g., fatty liver, cholestasis, daughertrien), and a lipid disorder (e.g., fatty liver, cholestasis, cardiovascular disorder (e.g., fatty liver, cholestasis), canimals to model humann-plok's disease). PKIN is useful in a number of drug screening techniques and to analyse the protecme of a tissue or cell type, for detecting differences in the chromosomal location due to translocation, inversion, etc., among normal, carrier or affected individuals, and as hybridisation cet., among normal, carrier or affected individuals, and as hybridisation in southern or northern analysis, dot blot or other membrane-based technologies, in PCR technologies, in dipstick, pin, multiformat enzyme linked immunosorbent (BLISA)-like assays and in microarrays utilising fluids or tissues from patients to detect altered PKIN expression. The recent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated human kinase polynucleotide useful for generating antibodies, as reagents in diagnostic assays and for screening for compounds useful for treating mental, biological or medical diseases
                                                                                                                                                                                                                                                                                                              The present sequence is novel human kinases share structural similarity with animal kinase. The human kinases share structural similarity with animal kinases, more particularly serine or similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs effective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the antibodies, as reagents in diagnostic assays, for the can kinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders. NHP oligonocleotides are used as probes. The labelled NHP probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide constructs in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene therapy for the modulation of NHP expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      32;

The present sequence is a novel protein kinase. The novel protein kinases and the nucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies and kinase antagonists may also be used to down regulate kinase expression and expression and activity. Diseases related to kinase expression and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding kinase polypeptides, useful for diagnosing and treating immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAU03531-AAU03557 represent novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or serine/threonine kinase (PTK and STK) families. The polynucleotides or serine/threonine kinase (PTK and STK) families. The polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with imappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoietic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. rheumatoid arthritis), neurological disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. disease), inflammatory disorders (e.g. infertility).

Additionally, polynucleotides encoding protein kinases may be used for gene therapy and as DNA probes in diagnostic assays.

The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify modulators of protein kinases and activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ٠.

The invention relates to an isolated polynucleotide (I) comprising one of administering to a mammalian subject a composition comprising the protein administering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II) and (III) are useful for diagnostic evaluation of disorders.
(I), (II) and (III) are useful for diagnostic evaluation of disorders.
(I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral sclerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies.
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               239

The invention relates to an isolated 14257 polypeptide and nucleic acid encoding it. The 14257 protein is a protein kinase that acts as a modulating agent in regulating a variety of cellular processes, including cell proliferation, differentiation, growth and division. The activity of the protein of the invention may be described as; cytostatic; osteopathic; hepatotropic; antidiabetic; neuroprotective; antiarthritic; dermatological; immunosuppressive; antiarthritic; dermatological; immunosuppressive; vasotropic; antiatherosclerotic; hypotensive; vasotropic; antiatherosclerotic; hypotensive; vasotropic; antiatherosclerotic; metabolic; immunomodulator and analgesic. The protein of the invention may act as a novel diagnostic target or therapeutic agent controlling certain disorders, for example kinase-associated or other 14257-associated disorders. These may include cellular proliferative disorders such as cancers e.g. acute lymphoblastic leukemia or Hodgkin's disease. Other disorders include bone metabolism disorders such as osteoporosis, disorders of the immune system, e.g. inflammatory, diabetes mellitus, osteoarthritis and asthma. Proteins of
  disorder; hypertension; coronary artery disease;

complementary sequences may also be used as DNA probes in diagnos assays. The kinase polypeptides may be used as antigens in the prof antibodies of kinase expression and activity. Anti-kinase antiand kinase antagonists may also be used to down regulate kinase expression and activity. Diseases related to kinase expression aractivity include rheumatoid arthritis, atherosclerosis, autoimmudisorders, complications of organ transplantation, myocardial infimune disorders, cardiomyopathies, strokes, renal failure, oxidative-stress related disorders, chronic inflammatory belvic disease, multiple sclerosis, asthma, osteoarthritis, psoriasis, rhinitis, autoimmunity, diabetes, candreproductive disorders.

                                                                                                                                                                                                                    WIPO
                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPC at ftp.wipo.int/pub/published_pct_sequences.

This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, costeopathic, cytostatic, anti-HIV, haemostatic, nephrotropic, antianaemic, antipscriatic and hepatotropic activity. The polynucleotides and the polypeptides of the invention can be used for gene therapy, protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polynucleotides are particularly useful for diagnosing, treating or preventing cell particularly useful for diagnosing, treating or preventing cell conditions, including adenocarcinoma, disease, acquired immunodeficiency syndrome (ALDS), Goodpasture's syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or hepatitis. ABUI1450-ABUI1845 represent the MDDT polynucleotides encoded by ABUI1450-ABUI1845, described in the disclosure of the invention.

NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPC at Epperior Specification, thus patent did not form part of the printed specification, thus patent did not form part of the printed specification, but was obtained in electronic format from WIPC at

The present sequence represents a learning-induced kinase, designated KKIAWRE kinase, which is isolated from rabbit brain tissue. KKIAMRE kinase is a cdc2-related kinase. The KKIAMRE kinase polynucleotides can kinase is a cdc2-related kinase. The KKIAMRE kinase polynucleotides can compare brotein for analysis, characterisation or therapeutic use, as markers for tissues in which the protein is preferentially expressed, as molecular weight markers on Southern gels, as chromosome markers or tags, to compare endogenous DNA sequences in patients to identify potential genetic disorders, as probes to hybridise and discover novel related sequences, as a source of PCR primers, and as an antigen to induce anti-DNA antibodies. The polypeptides can be used in assay to discover biological activity, to raise antibodies, as tissue markers, and to isolate correlative receptors or ligands. The polynucleotides may also be used for gene therapy for the treatment of disorders which are mediated by KKIAMRE kinase. memory; detection; earning induced kinase polynucleotides and polypeptides, analysis of learning and memory, and for gene therapy -Rabbit; KKIAMRE kinase; learning-induced kinase; learning; mcdc2-related kinase; brain; gene therapy; genetic disorder; identification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABZ77126 to ABZ77165 encode the human protein kinases given in ABP96048 to ABP96087. The protein kinases have antiasthmatic, antiinflammatory, antidiabetic, antiparkinsonian, antimigraine, cardiant, cytostatic, immunosuppressive and vulnerary activities, and can be used in gene therapy. A protein kinase therapeutic agent from the present invention, particularly a protein kinase gene agonist or antagonist, can be used for treating a disease or condition associated with a protein kinase in an individual. These diseases include chronic obstructive pulmonary diseases (COPD), asthma, non-insulin dependent diabetes, Parkinson's disease, migraine, myocardial infarction, inflammatory bowel disease, autoimmune disorders (e.g. allograft rejection or graft vs. host disease), cancers (e.g. leukaemias) or wound granulation.

                                                                                                                                                           New isolated human kinase polynucleotide useful for generating antibodies, as reagents in diagnostic assays and for screening for compounds useful for treating mental, biological or medical diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sands
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is novel human protein (NHP) known as human kinases share structural similarity with animal kinases, more particularly serine or threonine protein kinases. Human kinase cDNA is useful for the detection of mutant human kinase for the diagnosis of disease, and also as a therapeutic. It is useful for screening drugs offective in the treatment of symptomatic or phenotypic manifestations perturbing the normal function of NHP in the body. The NHP nucleotide sequences are useful for generation of antibodies, as reagents in diagnostic assays, for the identification of other cellular gene products related to human thinases, and as reagents in assays for screening compounds that are useful for treating mental, biological or medical disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       m
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Zambrowicz

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Protein;
```

```
NMP oligonucleotides are used as probes. The labelled WHP probes are useful for screening human genomic library for identifying polymorphisms and as primers in amplification assays to detect mutations within the exons, introns and splice sites that can be used in diagnostics and pharmacogenomics. Nucleotide constructencoding NHP products are used to genetically engineer cells in vivo that functions as bioreactors in the body delivering a continuous supply of NHP to the body. Nucleotide constructs encoding functional NHPs are used in gene therapy for the modulation of NHP expression.

US-06-874-347-25

Sequence 25, Application US/C8874347

Patent No. 5863741

GENERAL INFORMATION:

APPLICANT: Limper, Andrew H.

APPLICANT: Leof, Edward B.

APPLICANT: Leof, Edward B.

APPLICANT: Thomas, Charles F.

APPLICANT: Gustafson, Michael P.

TITLE OF INVENTION: CDC2 PROTEIN KINASE FROM PNEUMOCYSTIS

TITLE OF INVENTION: CARINI:

NUMBER OF SEQUENCES: 26

CORRESPONDENCE ADDRESS:

ADDRESSEE: Fish & Richardson P.C., P.A.

STREET: 60 South Sixth Street, Suite 3300

CITY: Minneapolis

STATE: MN

COUNTRY: USA

Patent No. 6428994

GENERAL INFORMATION:

APPLICANT: University of Southern California

IITLE OF INVENTION: CDNA, GENOMIC, AND PREDICTED PROTEIN

TITLE OF INVENTION: SEQUENCES OF LEARNING-INDUCED KINASES

FILE REFERENCE: 13761-707

CURRENT APPLICATION NUMBER: US/09/411,628

CURRENT FILING DATE: 1999-10-01

EARLIER APPLICATION NUMBER: US 60/102,906

EARLIER FILING DATE: 1998-10-02

NUMBER OF SEQ ID NOS: 16

SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 298

Sequence 14, Application US/09266225D

Patent No. 6573364

GENERAL INFORMATION:
APPLICANT: Kingsmore, Stephen
APPLICANT: Tchernev, Velizar

ITTLE OF INVENTION: Isolation and Characterization of Hermansky-Pudlak
ITTLE OF INVENTION: Syndrome (HPS) Protein Complexes and HPS Protein:
ITTLE OF INVENTION: Interacting Proteins
FILE REFERENCE: 15966-523

CURRENT FILING DATE: 1999-03-10

NUMBER OF SEQ ID NOS: 19

SOFTWARE: Patentin Ver. 2.1

LENGTH: 298
                                                                                                                                                                                                                                           ein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         6

Patent No. 6518021
GENERAL INFORMATION:
APPLICANT: Ole THASTRUP, et al.
TITLE OF INVENTION: A Method For Extracting Quantitative Informati
TITLE OF INVENTION: On A Cellular Response
FILE REFERENCE: 3759-0110P
CURRENT APPLICATION NUMBER: US/09/417,197
CURRENT FILING DATE: 1999-10-07
NUMBER OF SEQ ID NOS: 143
                                                                                                                                                                                                                                                                                                                                                                                                                                   4

Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
